The following sample CVs use fictitious information, names, and contact details. Any relevance to persons, living or otherwise, is a coincidence. The templates have been created to give you an idea of how some of the best ones are constructed when applying for a role in the NHS. There is no set format for constructing a CV, and you will see that they all vary in content, design, and presentation. Your CV should be unique to you, so please feel free to edit one of the templates to suit your professional needs. Good luck.

7 Software Developer Resume Templates

Welcome to your new guide, which will help you submit a winning resume for a software developer position within an organization. This guide will include seventemplates you can modify and amend for your resume when applying for a position within any organization. The resumes are fully editable so that you can add your specific information.

What is a Resume?

A Resume, or Curriculum Vitae (CV), is a document many employers ask candidates to send when they apply for an organization. The purpose of the resume is to allow the employer to assess the candidate before offering them an interview or forwarding them to the next stage of the selection process. In many cases, a resume is the first stage of the selection process and a candidate's opportunity to create a good first impression. From an employer's perspective, this allows them to sift through multiple resumes to save time by rejecting candidates whose resumes do not meet the required criteria.

What should a resume include?

In addition to your personal information, such as name, address, telephone number, qualifications, and work experience, this should also include a personal profile that tells the employer about you.

A resume, in general, should be between two to three pages at most. The assessor may lose focus and reject your application if anything more than that is required. If you consider it from an assessor's point of view and consider that they will probably be looking at numerous resumes, you should make it as short and relevant as possible. That way, you will stand out as someone they are happy to put forward for an interview.

Tailor your CV

A common mistake is that candidates use the same resume for multiple jobs and applications. If you do this, you may not be successful. Why, you may ask? Simply put, each position will come with a person specification and set of criteria, skills and qualities desired by the employer. So, to give yourself the best chance of success, you need to tailor your resume to match the role.

Where do I find the information to tailor my resume?

Usually, this information will be found within the job description, listing the person specifications, skills, and qualities required for the role. Some organizations also include values which are specific to them as an organization. These are vital and will also be applicable. Armed with the required information, your task is to populate your CV, where possible, with the desired skills, attributes, person specification details and competencies to give you the best chance of success. In a later section, we will look at what it takes to tailor your resume for a for a software developer position and the desired skills and attributes.

Technical Skills

Programming Languages: Candidates should be proficient in various programming languages such as C#, Java, Python, JavaScript, and their respective frameworks is fundamental. Each language has its own syntax and use cases, making it essential for developers to master one or more to write efficient, effective code.

Database Management: Knowledge of SQL, PostgreSQL, NoSQL, and other database systems is crucial for storing, retrieving, and managing data. Developers need to understand how to design database schemas, write queries, and ensure data integrity.

Version Control: Tools like Git and platforms such as GitHub or GitLab are essential for tracking changes in code, collaborating with other developers, and maintaining a history of project development.

Frameworks and Libraries: Familiarity with frameworks such as .NET, Angular, React, Django, or Spring helps in building robust applications. These frameworks provide pre-written code, tools, and libraries to streamline the development process.

Software Development Methodologies: Understanding methodologies like Agile, Scrum, or DevOps is vital for managing projects efficiently. These methodologies emphasize iterative development, continuous feedback, and collaboration.

Debugging and Testing: Proficiency in identifying, analyzing, and fixing bugs is crucial. Developers should also know how to write and implement various types of tests (unit tests, integration tests, etc.

Personal Qualities

Technical skills alone will not be the only factor an assessor looks at when looking at your resume. They will also be looking at how you align with the organization's values, code of ethics and mission. Although these are outside the scope of this guide, you should spend some time researching the website of the organization you are applying to. Here you will find the company values & code of ethics. You must ensure you align with these on your resume. You could be the best technical candidate, but if you do not align with the values your chances of success are remote.

As well as technical skills and specific values, you will need to include your behavioral traits, as these are equally important to the role of a software developer. These behavioral traits which you must demonstrate evidence of on your resume. Often these will include the following;

Problem Solving Skills: A competent software developer excels at identifying issues, analyzing potential solutions, and implementing effective fixes. They approach problems methodically, breaking them down into manageable parts and finding creative ways to overcome challenges.

Attention to Detail: Precision is crucial in software development. Developers must have a keen eye for detail to write accurate code, catch errors, and ensure high-quality outputs. Even small mistakes can lead to significant issues, so meticulousness is essential.

Effective Communication: Strong verbal and written communication skills are necessary for collaborating with team members, including non-technical stakeholders. Developers need to explain complex technical concepts in an understandable way and listen actively to feedback.

Adaptability and Continuous Learning: The tech industry evolves rapidly, so developers must be open to learning new technologies, frameworks, and methodologies. They should stay updated with industry trends and be willing to adapt to new tools and practices.

Time Management: Developers must juggle multiple tasks and projects, often with tight deadlines. Effective time management skills help them prioritize tasks, stay organized, and ensure timely delivery of high-quality work.

Collaboration & Teamwork: Software development often involves working in teams. A competent developer works well with others, shares knowledge, supports colleagues, and contributes to a positive and productive team environment.

Initiative and Self-Motivation: Proactive developers take ownership of their work, seek out new challenges, and strive for continuous improvement without needing constant supervision. They show initiative in learning and applying new skills.

Integrity and Responsibility: Trustworthiness and accountability are key traits. Competent developers take responsibility for their work, own up to mistakes, and are committed to delivering high-quality, reliable software.

User-Centric Mindset: Understanding and prioritizing user needs is essential. Developers should focus on creating user-friendly, functional, and efficient software, ensuring that end-users have a positive experience.

7 Sample Resume Templates

This section provides seven templates you can use and modify to suit your experiences, qualifications, and personal information. Please ensure that all information is honest, valid, and true to yourself. You may be asked to elaborate on the information in your resume during the latter stages of the selection process.

Final Advice

Finally, and we cannot stress enough how important this is, ensure that wherever possible, you match your resume to the skills and qualities required and values of the organization you are applying to, especially in the 'personal profile' and when explaining your duties for previous employments.

The samples provided include completed elements, such as the personal profile/statement, job tasks, and key achievements. These examples only show how you can include the essential skills, attributes, and values within these fields.
The templates included below are there for you to view as part of your preparation, and this document is not editable. There are editable copies of each of the templates included with the purchase; these are available via separate downloads.

The very last piece of advice we can give is this. Once you have completed your resume and are happy with its content, permanently save the document as a PDF before you send it. NEVER send a word document to an employer, as this often will change the formatting depending on the assessor's computer, which may differ from yours. Also, any grammatical/spelling errors would be highlighted on the word document. Sending a PDF version will ensure that the resume will look consistent on any device it is viewed on, and if there are any errors, these will not be obvious at a glance.

CV Template 1

Name Here
Address: Address here, Town here, Zip code here
Email: my.email@mail.com **Phone:** + 11111111111

PERSONAL PROFILE

Highly skilled and motivated Software Developer with 6 years of extensive experience designing, developing, and implementing applications and solutions using various technologies and programming languages. Adept at using full-stack expertise to build interactive, user-centered websites and applications that scale efficiently. Proficient in front-end and back-end development, database management, and cloud services, ensuring high performance, scalability, and robustness.

Demonstrates expertise in translating client requirements into technical solutions, with a strong focus on enhancing user experience and optimizing performance. Proven track record of leading cross-functional teams in Agile environments to deliver high-quality software on time and within budget. Skilled in developing RESTful APIs, implementing microservices architecture, and utilizing containerization tools like Docker and Kubernetes for streamlined deployment.

PERSONAL QUALITIES

- **Problem-solving:** Exceptional problem-solving abilities and a keen eye for detail, capable of debugging complex issues and enhancing code quality through rigorous testing and code reviews.
- **Adaptability:** Committed to continuous learning and staying updated with the latest industry trends and technologies to drive innovation and efficiency in software development processes.
  Teamwork: Able to work collaboratively with other software developers on large projects and mentor junior developers and adopting a collaborative & inclusive culture.
- **Time Management:** Able to work efficiently on multiple projects simultaneously and prioritize tasks as per deadlines and changing priorities.
- **Effective Communication:** Skilled in communicating with stakeholders, colleagues, clients at all levels both verbally and written methods.

TECHNICAL SKILLS

- **Programming Languages:** JavaScript, Python, Java, C#, Ruby.
- **Web Technologies:** HTML5, CSS3, React, Angular, Node.js, Django, Ruby on Rails.
- **Databases:** MySQL, PostreSQL, MongoDB, SQLite.
- **Version Control:** Git, SVN.
- **Cloud Services:** AWS, Azure, Google Cloud Platform.
- **Development Tools:** Visual Studio Code, Eclipse, IntelliJ IDEA, Docker, Kubernetes.
- **Other Skills:** Agile/Scrum methodologies, RESTful API's, Microservices Architecture, Unit Testing, Continuous Integration/Deployment (CI/CD).

EMPLOYMENT

Senior Software Developer   (Month, Year – Present)
Company here
- Led the development of a large-scale web application using React, Node.js, and MongoDB, improving user engagement by 35%.
- Designed and implemented RESTful APIs for mobile and web applications, ensuring robust and scalable back-end services.
- Mentored junior developers through code reviews and pair programming, improving team productivity and code quality.

- Collaborated with cross-functional teams to define, design, and ship new features, contributing to a 20% increase in customer satisfaction.
- Utilized Docker and Kubernetes to streamline the deployment process, reducing deployment time by 40%

Software Developer (Month, Year – Month, Year)
Company here
- Developed and maintained web applications using Angular and Java, enhancing performance and user experience.
- Participated in the full software development lifecycle, from requirement gathering and design to implementation and testing.
- Implemented a microservices architecture that improved system reliability and scalability.
- Automated testing processes using Jest and Selenium, reducing the number of bugs in production by 30%.
- Worked closely with clients to understand their business needs and provided technical solutions, leading to successful project deliveries.

Junior Software Developer (Month, Year – Month, Year)
Company here
- Assisted in the development of web applications using Ruby on Rails and JavaScript.
- Debugged and resolved software issues, contributing to a smoother user experience.
- Conducted code reviews and provided feedback to peers, fostering a collaborative development environment.
- Developed SQL scripts to manage and manipulate databases, ensuring data integrity and performance.
- Supported the maintenance of legacy applications and migrated them to modern technologies.

EDUCATION, CERTIFICATIONS & PROJECTS

Bachelor of Science in Computer Science (Year to Year)
University Address

Certifications
AWS Certified Solutions Architect (Year to Year)

Certified ScrumMaster (CSM) (Year to Year)

Microsoft Certified: Azure Developer Associate (Year to Year)

Projects

Project Management Tool - Developed a project management tool using Django and React that allowed teams to track progress, assign tasks, and manage deadlines efficiently.

E-commerce Platform - Built a scalable e-commerce platform using Node.js and Angular, integrated with payment gateways, and implemented user authentication and authorization.

Chat Application - Created a real-time chat application using WebSocket and React, enabling instant communication between users with a secure and responsive interface.

Email address: Email address goes here.

Date of Birth: D.O.B. goes here.

Marital Status: Status goes here

Nationality: Nationality here

Personal statement: Proactive and innovative Software Developer with 3 years of hands-on experience in Python and Java development. Skilled at designing, developing, and optimizing high-performance trading and simulation platforms, microservices, and cloud-based computation solutions. Demonstrates, a keen eye for detail with exceptional problem-solving skills. An ability to enhance research productivity by developing robust systems and tools. Passionate about test-driven development, big data analytics, and continuous CI/CD infrastructure improvement. Strong communicator with a self-starter attitude, capable of managing multiple tasks in fast-paced environments.

Educational qualifications: Bachelor of Science in Computer Science.

Employment history: **Software Developer – Company name goes here**

- Contributed to the development of a high-performance trading & simulation platform, enhancing processing speed by 30%
- Assisted in creating and optimizing microservices using Java and Python for both onsite and cloud environments, improving system scalability and reliability.
- Developed interfaces and tools for accessing historical market data and running trading simulations, positively impacting research productivity.

MO/YR - Present

- Designed and implemented cloud-based parallel computation solutions, efficiently handling large data sets shared across multiple resources.
- Integrated monitoring and alert services, ensuring seamless operation and prompt issue resolution.
- Actively improved CI/CD infrastructure, streamlining software development, testing and deployment process.

- Developed big data analytics solutions to collect, transform and utilize data for autonomous decision making, enhancing process improvements

Junior Software Developer – Company name goes here

MO/YR – MO/YR

- Assisted in the design and development of data-driven applications using Python and Java, contributing to the successful delivery of key projects.
- Participated in creating detailed test plans, test cases and test data-sets, ensuring thorough testing and high-quality software.
- Utilized object-orientated design principles and patterns to build maintainable and scalable applications.
- Emphasized unit and integration testing, significantly reducing the number of bugs in production.
- Collaborated with cross-functional teams to implement database solutions using SQL and NoSQL technologies.
- Operated in DevOps environment, using tools like Docker and Jenkins to automate deployment, improving efficiency.
- Worked extensively in a Linux environment, developing scripts and tools to automate routine tasks to enhance productivity.

Significant Projects

- Developed a real-time trading platform using Java and Python, integrated with various financial data providers and optimized for low-latency trading.
- Built a data processing pipeline on AWS, utilizing S3, Lambda and Redshift to handle large volumes of financial data used for analysis and reporting.
- Implemented a Spark-based analytics solution to analyze historical market data, proving insights for trading strategies and decision-making.

Employment History

Date – Present   [Company name here]

As a Junior Software Developer, I collaborate closely with the global program developer to create, maintain, and modify systems tailored to client needs, ensuring high performance and reliability. I participate in code reviews, providing constructive feedback and suggesting innovative ideas to enhance development. Additionally, I write clean, efficient, and well-documented code, contributing to developing secure and scalable solutions. I troubleshoot and debug issues with existing software, ensuring timely resolution and minimal disruption to users. Engaging in dynamic and meaningful projects, I creatively solve complex problems and overcome challenges while continuously discovering, researching, and learning new technologies to stay current with industry trends and best practices.

Date – Date   [Company name here]

As the Intern Software Developer, I assisted in developing web applications using JavaScript, HTML, and CSS, contributing to front-end and back-end development. Participating in team meetings and collaborating with senior developers ensured a clear understanding of project requirements and delivered high-quality solutions. I conducted debugging and testing to ensure functionality and performance, developed documentation to improve maintainability and scalability, and supported the integration of various APIs to enhance application features and usability.

Hobbies and other interests

I enjoy working on personal coding projects, contributing to open-source software, and attending tech meetups and hackathons in my free time. I am passionate about reading tech blogs and books, maintaining a personal blog, and exploring new technologies and frameworks. Additionally, I enjoy gaming, developing game prototypes, and solving puzzles and brain teasers to enhance my problem-solving skills. I engage in outdoor activities like hiking and cycling to balance my tech interests.

Profile

Proactive and detail-oriented Software Developer with over 5 years of experience specializing in C# and VB.Net within Agile frameworks. Known for effective collaboration with development teams and product owners, I excel in designing, implementing, and maintaining functional programs. My expertise includes producing clean, efficient code, integrating third-party programs, and ensuring high performance and reliability.

I have a deep understanding of multi-layered architecture, enabling robust and scalable application development tailored to business requirements. With strong organizational skills, I manage workloads efficiently to ensure timely project delivery while maintaining quality standards. My problem-solving abilities and keen attention to detail help me troubleshoot, debug, and upgrade software effectively, minimizing downtime and ensuring business continuity.

I excel in creating technical documentation for reference and reporting, facilitating knowledge sharing and future maintenance. My excellent communication skills allow me to articulate technical concepts to technical and non-technical stakeholders, adopting a collaborative work environment. I am a proactive learner, committed to staying current with industry trends and new technologies to drive continuous improvement and innovation in software development processes.

Key Skills

- Proficient in programming languages C#, VB.Net,SQL
- Skilled with using .NET Framework and ASP.NET
- Experienced with using Agile (scrum) and Test-Driven (TDD)methodologies
- Frequent user of Visual Studio, Git & Jenkins, SQL server &MySQL.
- Skilled with OOP, Multi-Layered Architecture and technical documentation
- Analytical thinking and the ability to troubleshoot and resolve issues efficiently.
- Ability to prioritise workloads and multi task to always meet deadlines.
- Collaborative mindset, working well within a team to achieve common goals.
- Openness to learning new technologies and methodologies.
- Meticulous in writing clean, efficient, and error-free code.
- Innovative thinking in designing and implementing software solutions.
- Proactive in taking initiative and ownership of tasks.
- Diligent in testing and debugging to ensure software quality.

Career Summary

Date – Present Software Developer

- Collaborate with the development team and product owners to design and plan solutions based on business requirements.
- Produce clean, efficient code in C# and VB.Net based on specifications, ensuring high performance and reliability.
- Integrate software components and third-party programs, enhancing system functionality and user experience.
- Verify and deploy programs and systems, ensuring smooth rollouts and minimal downtime.

- Troubleshoot, debug, and upgrade existing software, identifying and resolving issues promptly to maintain business continuity.
- Create technical documentation for reference and reporting, facilitating knowledge sharing and future maintenance.

Date – To Date, Junior Software Developer

- Assisted in the development of web and desktop applications using C# and VB.Net, contributing to both front-end and back-end development.
- Participated in Agile Scrum meetings, collaborating with cross-functional teams to understand project requirements and deliver high-quality solutions.
- Conducted debugging and testing of applications, ensuring functionality and performance before deployment.
- Developed and maintained technical documentation, improving project transparency and knowledge transfer.
- Supported the integration of various APIs to enhance application features and usability.

Education & Training

- Bachelors of Science in Computer Science.
- Microsoft Certified: Azure Developer Associate
- Certified Scrum Developer (CSD)

Projects

Inventory Management System: Developed an inventory management system using C# and VB.Net, streamlining inventory tracking and reporting processes for a mid-sized retail company.

Customer Relationship Management (CRM) Tool: Built a CRM tool integrated with third-party applications, improving client communication and data management for a financial services firm.

Interests & Hobbies

In my free time, I enjoy working on personal coding projects, contributing to open-source software, and participating in tech meetups and hackathons. I am passionate about reading tech blogs and books, maintaining a personal blog, and exploring new technologies and frameworks. Additionally, I find joy in gaming, developing game prototypes, and solving puzzles and brain teasers to enhance my problem-solving skills. To balance my tech interests, I engage in outdoor activities like hiking and cycling.

PERSONAL PROFILE

Seasoned Senior Software Developer with over 10 years of experience in back-end web development and software engineering. Expertise in utilizing object-oriented programming (OOP) concepts to design, develop, and enhance robust software solutions. Proven track record of programming proficiency and delivering high-quality products that meet business objectives. Strong analytical skills combined with excellent problem-solving abilities. Effective communicator with a collaborative approach to working within cross-functional teams. Dedicated to maintaining attention to detail while prioritizing tasks to achieve project milestones. Passionate about continuous improvement and upholding core values such as discipline, responsibility, and integrity.

SKILLS AND ACHIEVEMENTS

TECHNICAL SKILLS

- **Programming Languages:** Java, C#, Python, SQL
- **Web Development:** JavaScript, HTML/CSS, Node.js, ASP.NET
- **Frameworks & Technologies:** Spring Boot, Hibernate, .NET Framework
- **Databases:** MySQL, PostgreSQL, MongoDB
- **Tools & Version Control:** Git, Jenkins, Maven & Docker
- **Methodologies:** Agile (Scrum), Test-Driven Development (TDD)

COMPETENCIES & BEHAVIOURAL SKILLS
- Strong communication skills both verbal and written. Ability to to explain technical concepts to technical and non-technical stakeholders.
- Collaborative mindset, working well within a team to achieve common goals.
- Analytical thinking and the ability to troubleshoot and resolve issues efficiently.
- Flexibility in responding to changing project requirements and priorities.
- Ability to prioritize tasks and manage time effectively to meet deadlines.
- Innovative thinking in designing and implementing software solutions.
- Effective decision maker. Able to assess situations and make timely, well-informed decisions.

PROJECTS
- Developed a comprehensive health management system for Superior Wellness, integrating with wearable devices and health data APIs to provide real-time analytics and reporting.
- Led the development of an e-commerce platform using ASP.NET and SQL Server, enabling seamless online transactions and order management.

EDUCATION

XXXXXX University

Bachelor of Science: Computer Science

Certifications: Certified Scrum Developer (CSD) & Oracle Certified Professional & Java SE Programmer (OCP Java SE)

WORK EXPERIENCE

YEAR - YEAR   **Software Developer**

- Developed and maintained enterprise-level applications using C# and .NET Framework, enhancing system capabilities and performance.
- Designed relational database schemas and optimized SQL queries for efficient data retrieval and manipulation.
- Conducted unit testing and participated in peer code reviews to ensure high-quality deliverables.
- Collaborated with cross-functional teams to gather requirements, define technical specifications, and deliver scalable solutions.
- Implemented version control and CI/CD pipelines using Git, Jenkins, and Maven to streamline development processes.
- Documented technical specifications and user guides to facilitate seamless knowledge transfer and system support.

YEAR - YEAR   **Senior Software Developer**

- Lead back-end web development initiatives, utilizing Java and Spring Boot to create scalable and secure software solutions.
- Collaborate closely with operations and sales departments to understand requirements and implement effective technical solutions.
- Design and implement RESTful APIs, ensuring seamless integration with front-end components and third-party services.
- Utilize OOP principles to develop reusable components and libraries, optimizing code efficiency and maintainability.
- Troubleshoot and debug complex issues to ensure smooth functionality and performance of existing systems.
- Mentor junior developers, providing guidance on best practices and fostering a culture of continuous learning and improvement.
- Champion Agile methodologies, participating actively in sprint planning, daily stand-ups, and retrospectives.

_____

EXPERIENCE

COMPANY NAME, JOB TITLE HERE.   **From - To**

- Collaborate with Solution Architects and Project Management teams to design, implement, test, and deploy bespoke applications, improving business processes and capabilities.

- Develop and maintain web-based and standalone software solutions for various clients, ensuring high performance and reliability.

- Utilize Azure DevOps for backlog management, sprints, repository management, and solution delivery, leveraging Git and Azure Pipelines for efficient development workflows.

- Implement best practice development processes within client teams, providing guidance and mentorship to up-skill existing staff.

- Ensure alignment of applications, data, and integration solutions with development and architectural principles.

- Document business processes and write technical specifications to ensure clear communication and efficient development.

COMPANY NAME, JOB TITLE HERE   **From - To**

- Led the development of custom software solutions using C#, .Net, and JavaScript, enhancing client business operations.

- Integrated applications with Dynamics 365 and SharePoint Online, providing seamless user experiences and improved functionality.

- Managed API development and integration using platforms such as Mulesoft and BizTalk, ensuring robust data exchange between systems.

- Utilized Azure Cloud Services, including Azure Web Apps and Azure SQL, to deploy scalable and secure solutions.

- Created business process maps and technical specifications to guide development efforts and ensure alignment with client requirements.

- Applied ITIL concepts to manage the software development lifecycle, including participation in change advisory boards (CAB).

name_lastname@email.com | 09876 4747474 | Ficshire, UK

Motivated Junior Software Developer with 2 years of commercial experience in developing and maintaining web applications using C#, .NET MVC, .NET Core, and MS SQL. Skilled in designing, implementing, and debugging software solutions and proficient at collaborating with cross-functional teams to deliver high-quality products. Known for strong problem-solving abilities, attention to detail, and excellent communication skills. I am eager to continue learning and growing professionally in a dynamic development environment.

SKILLS & ACHIEVEMENTS

- **Languages -** C#, JavaScript, HTML, CSS.

- **Frameworks - .**NET MVC, .NET Web API, .NET Core.

- **Databases: -** MS SQL.

- **Tools & Technologies -** Visual Studio, Git, Azure DevOps.

- **Methodologies -** Agile (Scrum), Test-Driven Development (TDD)

- **Communication -** Strong verbal and written communication skills, able to liaise effectively with team members and clients.

- **Problem Solving -** Excellent analytical skills for identifying issues and developing solutions.

- **Attention to Detail** - Keen eye for detail, ensuring high quality and consistency in code.

- **Self-motivation -** Proactive and open to continuous learning and professional development.

- **Collaboration -** Effective team player, contributing to a collaborative work environment.

EXPERIENCE

From – To   **(Job Title Here)**

- Developed and maintained web applications using C#, .NET MVC, .NET Web API, and .NET Core.
- Participated in the design and development of new and ongoing web software projects.
- Investigated and debugged error reports, ensuring timely and effective resolution.
- Maintained up-to-date time tracking and task status information in accordance with company processes.
- Liaised with customers to ensure the delivery of excellent customer service.
- Provided technical reviews of requirements, organized requirements into sprints, and estimated development time.
- Identified and recorded areas of the codebase requiring refactoring and performed refactoring with minimal impact on functionality.

- Adhered to defined testing practices to deliver high-quality software.
- Raised potential problems and risks during development with project leads or managers.
- Identified opportunities for process improvements, tools, or training to enhance software delivery and skill development.

From – To   **(Job Title Here)**

- Assisted in the development of web applications using C# and JavaScript.
- Conducted debugging and testing of applications to ensure functionality and performance.
- Created and maintained documentation for new and existing applications.
- Supported the integration of various APIs to enhance application features.
- Participated in code reviews and provided feedback to improve code quality and performance.

PROJECTS

- **Customer Management System:** Developed a comprehensive customer management system using .NET Core and MS SQL, improving client business operations.
- **E-commerce Website**: Contributed to developing an e-commerce website using .NET MVC and JavaScript, enhancing user experience and functionality.

The above sample CVs use fictitious information, names, and contact details. Any relevance to persons, living or otherwise, is a coincidence. The templates have been created to give you an idea of how some of the best ones are constructed when applying for a role in the NHS. There is no set format for constructing a CV, and you will see that they all vary in content, design, and presentation. Your CV should be unique to you, so please feel free to edit one of the templates to suit your professional needs. Good luck.
